

Design icon dedicated to wellbeing. Airport Hotel Mövenpick, Stuttgart (GER)

[Architecture | Project]

Opened in 2008, the four-star business hotel was constructed next to Stuttgart's airport terminal according to the plans of Braunschweig architects Reichel&Stauth. Strategically located between the airport and the exhibition centre, it offers short distances to both locations, these being predominantly frequented by the business people that make up much of its clientèle. The architects decided in favour of a glass façade with a striking structural design in the form of a rounded H. Thanks to the generous red-tinted glazing, cheering daylight floods into virtually all the public and semi-public areas of the hotel. The world-renowned Italian architect and designer Matteo Thun was commissioned to create an interior characterised by conceptual constraints and understatement. In order to overcome the

usual, standardised business typology, he implemented a design concept that reinterprets the traditional motifs rooted in the region in a more modern vein – a specially developed iconography showing hunting symbols, the state coat of arms of Baden Württemberg or the famous scissor cuts of Luise Duttonhofer in the form of symbols and pictograms. The use of particularly this type of motif underlines the uniqueness of the hotel complex, while exceptional design has converted the venue into a place of sensual experience, aided and abetted by the automatic door systems from DORMA. These not only create an elegant access to the hotel and wide thoroughfares in the interior but also integrate homogeneously within the overall concept devised by Matteo Thun.

DORMA products
Automatic operators for sliding doors, telescopic sliding doors and swing doors

[Details]

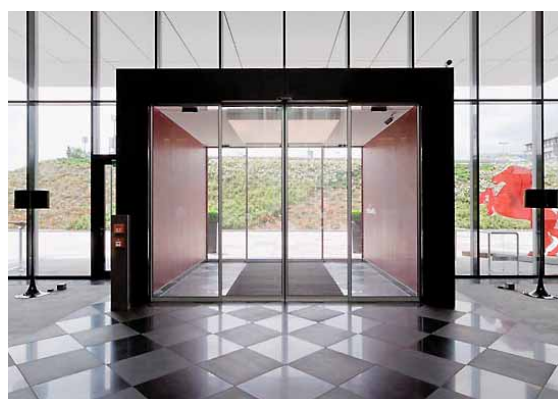

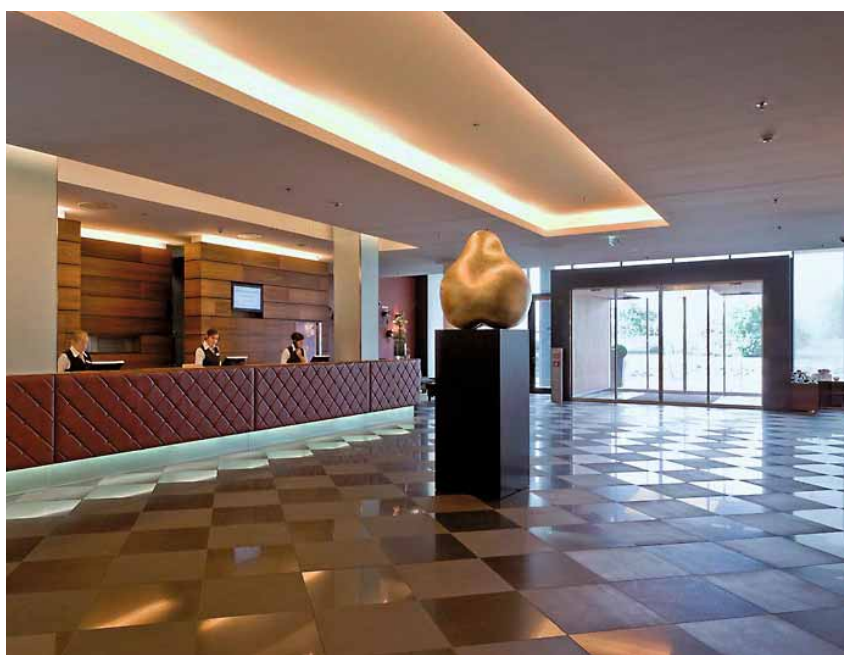

Project | public

In the foyer of the exclusive business hotel, high-quality materials combine with an uncluttered, understated design to create an atmosphere of wellbeing, guaranteeing a relaxed stay for its clientèle.

The automatic sliding door operator from DORMA elegantly parts to allow passage at will.

In the entrance area of the four star hotel, an automatic door system from DORMA performs its tasks quietly and with exemplary smoothness, facilitating ingress and egress while protecting the interior from noise and dust.

Project | public

The access to the restaurant is also protected by a telescopic sliding door from DORMA.

The interior of the restaurant is characterised by elegant understatement – an atmosphere of sheer quality enhanced by indirect light and a design based on discretion.

An automatic door from DORMA ensures efficient traffic flows between the kitchen and restaurant.

The integrating interior design concept with its relaxing elements has been strictly adhered to throughout the restaurant area.
